

Documentation module merge_docx

Define lang add extra module

If you want to define a language according to your criteria is optional

Inherit model and define function `context_lang`

Example 01:

```
1  # -*- coding: utf-8 -*-
2  #####
3  # For copyright and license notices, see manifest .py file in root directory
4  #####
5  from odoo import models, fields
6
7
8  class SaleOrder(models.Model):
9      _inherit = "sale.order"
10
11      def context_lang(self):
12          return self.partner_id.lang or self.lang or self.env.user.lang or 'en_US'
13
```

Example 02:

```
1  # -*- coding: utf-8 -*-
2  #####
3  # For copyright and license notices, see manifest .py file in root directory
4  #####
5  from odoo import models, fields
6
7
8  class AccountMove(models.Model):
9      _inherit = "account.move"
10
11      def context_lang(self):
12          return self.partner_id.lang or self.lang or self.env.user.lang or 'en_US'
13
```

Three forms of translation

Lang is passed by context

01. Translate labels forms

Translate the label of the `date_order` field of the `sale.order` model add prefix `bf_label_` before field name

Example: `o.bf_label_date_order`

02. Translate function _('Text to translate')

First define the text to translate

Translated Terms

Internal Source Terms & Conditions/Notes: Search...

Filters Group By Favorites 1-1 / 1

Internal Source	Translation Value	Translated field	Language	Module	Type	Status
Terms & Conditions/Notes:	Términos y condiciones/Notas	report_merge.docx	Spanish (PE) / Español (PE)	merge_docx	Code	Translated

Example: _('Terms & Conditions/Notes')

03. Translate function _t('Name Translated field')

Ideal for translating long texts

Search translated per field **Translated field, Language & Type** the language is passed by context and the code type is already defined
